FYI, earthcam seems to know our IP and is blocking us from logging into their cameras when we have a valid username and password. I was however able to login using a proxy server. If they did identify our IP I'm not sure how they managed to do it unless they can pull our DNS table and there is a dns entry for the office or something.

Here is one of their systems

login at earthcam.net
user = cfoley
pass = temp

-cm

Our office IP isn't in DNS anywhere. Not sure how they could have gotten that unless from an old employee or someone sending them mails from the office. We got a new IP when we moved into the new office.

I'm still just amazed at how confusing and hard to use their interface is.
